Ashish Kumar *(8+ Years Frontend Experience)*

+91-8979513242 ashish.codes2@gmail.com LinkedIn

Lead Frontend Developer with 8+ years building scalable single-page applications using React, Redux, TypeScript, and modern JavaScript, grounded in SOLID principles and Clean Architecture. Skilled in unit and integration testing (React Testing Library, Jest), performance optimization, UI prototyping, and using GitHub Copilot with prompts and agents to accelerate delivery. Experienced partnering with product managers, UX designers, and cross-functional teams in Agile environments to ship high-quality trading and consumer applications.

SKILLS

Core Frontend - React.js (v19.2.3), Advanced JavaScript (ES6+ - Closures, Promises, Async/Await, Event Loop, Modules), TypeScript | Redux, Hooks, React Router, Single-Page Application (SPA) Architecture, HTML5, CSS3, SCSS, Tailwind CSS, Styled-Components, Bootstrap | Context API, Web accessibility standards (WCAG)

State Management & Data - Redux, Context API, REST APIs, Axios, Fetch, Error Boundaries, Authentication (OAuth), Error handling, Caching, MySQL, GIT

Styling & UI Components - Tailwind CSS, Styled-components, Bootstrap, Chakra UI, Material UI, SASS, SCSS, Design Tokens

Testing & Quality - React Testing Library (RTL), Jest, Unit & Integration Testing, React Profiler, Webpack, Bundle Analyser

Monitoring & Analytics - Honeycomb via OpenTelemetry, CI/CD pipeline, Docker

Software Engineering Fundamentals - SOLID Principles, Design Patterns (Factory, Singleton, Strategy, Adapter, Observer, Dependency Injection), Clean Architecture (Separation of Concerns, Layered Architecture, Presentation/Domain/Data Layers), Modular Architecture (Feature-based Folder Structure, Low Coupling & High Cohesion, Scalable Project Structure)

Ways of Working- Agile-Scrum, Cross-Functional Collaboration, Code Reviews, GitHub Copilot

WORK EXPERIENCE

Omnicom Media Group | **Lead Software Engineer** 06/2021 – Present | Gurugram, IN

Q Cultural Insights – SaaS platform

Q is a trend-analytics platform that identifies, sizes, and compares the top cultural trends defining any category, topic, or brand across audiences, countries, and languages.

- Lead frontend development of QCore using **React 18**, **TypeScript**, and **Webpack 5**, architecting a modular, scalable codebase (SOLID, Clean Architecture, feature-based folders) with **Context API**, **custom hooks**, React Router-based **routing**, **authentication**, and error boundaries
- Built interactive trend-analytics dashboards and data visualizations (D3, Plotly, react-grid-layout) with advanced filtering, search, audience segmentation, and multi-format report export (PDF, PPTX, DOCX)
- Designed reusable, accessible UI component libraries (Chakra UI, SCSS/CSS Modules) and built **UI prototypes** to refine interaction concepts, optimizing performance via code-splitting, **lazy loading**, and **memoization** (React.memo, useMemo, useCallback)
- Delivered secure OAuth-based access control, integrated OpenTelemetry (Honeycomb) for **observability**, and led a dependency-modernization initiative (Webpack 5, ESLint 9, Jest 29), maintaining **unit/integration test** coverage (RTL, Playwright) while partnering closely with product managers and UX designers
- Leveraged **GitHub Copilot** with prompts and agents to accelerate feature development, scaffolding, and refactoring, improving delivery speed while maintaining code quality

Q-Assist

QAssist is an AI-powered cultural-intelligence chatbot, built on OpenAI's GPT-4 and curated proprietary data, that generates sourced cultural insights on demand.

- Built the QAssist **conversational chat interface** in React 18 and TypeScript, delivering a responsive, **real-time messaging** experience with streaming responses and prompt-driven interactions
- Implemented **pre-engineered prompt flows** and selectable prompt templates for consistent, high-quality AI outputs with source-attribution UI, and integrated the frontend with **GPT-4-backed services** via an Axios-based Adapter layer with dependency injection for testable service abstraction
- Built rich-text/HTML rendering of AI responses using sanitized output (DOMPurify) and memoized custom hooks for low-latency interactions
- Leveraged **GitHub Copilot** to speed up development and reduce delivery time

Q-Sparks

QSparks is an AI creative-briefing tool that acts as a brainstorming partner, generating provocative campaign concepts and creative briefs grounded in relevant cultural trends.

- Developed the QSparks AI creative-briefing experience in React 18 and TypeScript, enabling users to generate campaign concepts and briefs in minutes via multi-step Formik/Yup validated workflows
- Implemented **AI-generated content** and **AI image-generation** features **integrated with backend** generative services via Axios, handling async generation states
- Created rich-text editing and export capabilities (PDF, PPTX, DOCX) using Draft.js with responsive, accessible UI in Chakra UI
- Leveraged GitHub Copilot to accelerate scaffolding and iteration

Cognizant | Software Engineer

02/2019 – 05/2021 | Bengaluru, IN

Telstra Prepaid Recharge

Telstra is Australia's leading telecommunications company

- Developed and maintained the **prepaid recharge web application** (React, JavaScript), delivering responsive, customer-facing recharge and plan-management flows, and built/integrated REST API services for payments, plan selection, and account management
- Collaborated with backend and design teams in an **Agile environment** to ship features across release cycles
- Improved UI performance and cross-browser compatibility, contributing to **unit/integration testing** (React Testing Library, Jest) for production stability

Boost Prepaid Recharge

Boost is Australia's most reliable and economical wireless telecommunications brand

- Built customer-facing prepaid recharge features (React, JavaScript) and integrated payment gateways/REST APIs for secure transactions and account workflows
- Worked closely with cross-functional teams on **reusable UI components**; participated in **code reviews**, bug fixing, and testing to ensure a stable, high-quality user experience

Cognizant | Jr. Software Engineer

02/2018 – 02/2019 | Bengaluru, IN

Asset Management App

- Contributed to an internal asset-management web application (Java/Spring, JavaScript, SQL) supporting asset creation, assignment, cost tracking, and release workflows, including CRUD operations and database interactions
- Supported testing, debugging, and documentation under the guidance of senior engineers

EDUCATION

SRM University | B.Tech. (Computer Science Engineering) 2013-2017 | Chennai
